Linamar Receives Cummins' Awards for Outstanding Service

Guelph, Ontario – Linamar's Precision Part Machining (PPM) facility in Hungary was awarded the Cummins Generator Technologies Stamford Supplier of the Year 2007 award and most recently Cummins recognized Linamar's Camcor facility for as one of three finalists for Most Improved Supplier 2007-2008.

Cummins was impressed with Linamar's PPM facility and acknowledged their great efforts during 2007 in providing Total Cost of Ownership on their generator shaft production line.

Each year, PPM and all suppliers are evaluated by Cummins receiving scores based on a number of factors including total cost of ownership. PPM has worked hard to increase its rating with the customer and graduated from 'Category B' to 'Category A' in 2006, priming itself for the top honour - supplier of the year 2007.

"PPM has supplied Cummins for nine years and has focused on continually improving and meeting the needs of its customer; something we all strive to do at Linamar," said Linda Hasenfratz, Linamar CEO. "PPM obviously has the formula for success and customers are responding with sincere appreciation and now Camcor is following in its footsteps."

Linamar's PPM facility supplies a variety of Cummins' organizations around the world including: China, Germany, India, Mexico and Romania.

At the 2008 Cummins U.S. Supplier Conference in August another Linamar facility was recognized for overall improvements in quality, delivery and overall supplier performance. Linamar's Camcor facility located in Guelph, Ontario was announced as a Finalist for Cummins Most Improved Supplier 2007-2008.
